Water Evaluation Checklist

Topic	Required Evidence	Audit Observation	C/N
Water Color	Water should be clear with particles of natural substances. There should be no tinge of color in the water.		
Smell	There should be no chemical or unnatural kinds of smells. There should also be no sulfuric smell near the water or water source.		
Surface Temperature	The average of three tests should range between 60 F and 90 F. The tests should be taken at least three meters apart.		
Surface Observation	There should be no bubbles or foam along the surface. There should also be only natural things on the surface of the water.		
Bottom Observation	There should be nothing unnatural along the bottom of the water. If there are algae along the bottom, it should only be green.		
Wildlife Observation	Auditors should be able to see living organisms in the water. There should be nothing dead floating in the water.
